TRB Publications Index (PubsIndex) Database

The Transportation Research Board's Publications Index (PubsIndex) Database is a collection of more than 70,000 papers, articles, and reports from 1923 to date from TRB and its programs. The database allows users to search for papers by keyword, title, author, and index terms. Users may also browse the database by mode. In addition to the enhanced search capabilities, the database includes links to free or fee-based full text of papers when available.

The TRB Publications Index contains papers, articles, and reports published from 1923 to date by the:

- Transportation Research Board,
- Highway Research Board, TRB's predecessor,
- Strategic Highway Research Program, and
- Marine Board.

The TRB Publications Index:

- Contains links to the full text of the publication if available, and ordering information,
- Features both simple and advanced query screens,
- Allows for searching by author, title, series, conference, abstract, index terms and date,
- Provides a default keyword search that automatically searches multiple fields and allows for the combining of fields in a single query,
- Offers printing, downloading or emailing search results.
- Allows sharing of records or searches through Twitter, Facebook, and other social networking tools.

The PubsIndex Database is available on TRB's website at pubsindex.trb.org. The PubsIndex Database may also be searched via the TRID Database. On the Advanced Search page simply select "TRB Publications" from the Source drop down menu and enter your query.
